CONTRACTS & GRANTS SUMMARY

The following information summarizes the **external** funding record for Dr. Ortega. Internal funding is listed but not accounted for in the total of external funding.

- **2024**: $500,000 from ONR, recommended for funding $750,000 from NSF (co-PI), $20,000 from NSF, and $300,000 ONR recommended to active exercise option. Internal funding was awarded in the amount of $50,000.

- **CSU Overall Summary (committed)**: Total of external funding. $3,842,316; As PI: $3,920,539; As co-PI: $430,989. Note that $271,777 of the $430,989 of co-PI funding came from a supplemental from an existing DARPA CWC program. While I was part of the last year's program as a co-PI, I'm not counting that amount since I was not part of the original submission. Internal CSU funding $217,300.

RESEARCH INTERESTS

Dr. Ortega's research expertise is in 3D User Interfaces, part of Human-Computer Interaction. His primary work is in Augmented Reality (AR) and Virtual Reality (VR).

Broadly speaking, his research has focused on multimodal and unimodal interaction (gesture-centric), which includes gesture recognition and elicitation (e.g., a form of participatory design). This research area focuses on improving user interaction by (a) multimodal elicitation, (b) developing interactive techniques, and (c) developing microgesture interaction techniques. The primary domains for interaction include immersive analytics, assembly, and Navy and Marines use cases. His secondary area of research concentrates in AR display interface (i.e., output) to understand information access effort where different trade-offs are evaluated, including digital and physical clutter, type of tasks, the position of information displays (e.g., widgets), and cues in visual search tasks. Another area of research includes improving training for NAVY us cases using AR/VR with Brain-Computer Interfaces (e.g., fNIRS or EEG). Lately, Dr. Ortega has been interested in the impact that VR can have in health and how perception affects those types of applications. One particular type of environment includes Forest-Bathing. Finally, two exciting new problems that Dr. Ortega is looking into include how the post-Windows-Icon-Menu-Pointer (WIMP) paradigm will look in VR/AR as well as how the role of more accessible interfaces can improve everyday life for people that are less able in certain areas (e.g., non-sighted users, autism spectrum, etc.).

SECTION 3: Evidence of Teaching and Advising Effectiveness

TEACHING

Curriculum Development

Dr. Ortega created a complete set of courses for the Human-Centered Computing certificate. This includes CS 310H (mixed-reality design), CS 465 (Multimodal Interaction), the overhaul of CS 464 (introduction to HCI, which already existed), and the graduate course CS 567 (3D user interfaces). In addition, he participated in the co-development of CS-464 (virtual worlds).

4. CS-465. Developed in 2024 (and approved) to start Spring 2025. This course goes into depth about input devices and interaction techniques for Extended Reality including unimodal and multimodal interaction. This is a capstone course.

3. CS-310H, updated in Fall 2022, uses Unreal Game Engine 5. Between the classes and the lab sessions, students from Computer Science and other majors (cross-listed courses) learn how to develop a virtual reality environment. In addition, students learned design concepts and augmented and virtual reality theory. Dr. Ortega has also obtained more than 60 headsets to give to the students.

2. CS-464 was changed completely by Dr. Ortega from a usability course to a human-computer interaction with vital scientific concepts in experiment design and HCI concepts. Students develop a final capstone project in this class.

1. CS-567 is a very advanced research class where students develop augmented and virtual reality projects and understand the most cutting-edge concepts. This course is updated everything while maintaining key concepts.

Dr. Ortega is expected to introduce an additional course as part of his NSF CAREER.

NOTE: CS 567 or other courses may appear below another class because when it is not offered. The reason is that a student may be allowed to take it with the professor's permission. If this is the case, the student watches the video from a previous semester. This is available to selected students that may benefit from the material for their research given the class is offered once every other year. The enrollment numbers are based on the final numbers after students have dropped.

Description of Mentoring Activities (CSU)

Dr. Ortega holds weekly meetings with all of the students at CSU that are doing research under his supervision. He also has one-to-one meetings with Ph.D. students every other week or as needed. He meets with M.S. students and undergraduate students as needed. In addition, Dr. Ortega holds the CS 793 in Human-Computer Interaction. The CS 793 meetings are held weekly. Activities during the meetings include paper presentations, project presentations, guidance about research, and planning, among others. Finally, whenever requested, he offers independently supervised research credits for undergraduate students.

Teaching Improvements (CSU)

After the NSF Workshop on teaching for new faculty that Dr. Ortega attended in August 2018, he implemented new methodologies in the classroom. First, Dr. Ortega started using the iClicker to ask questions before providing the answer (or even at times) the actual information students need to answer. This has been shown to provide an improved recall of concepts for students even when they don't get the correct answer. In addition, Dr. Ortega created a series of activities (including the iClicker) that were designed to improve learning. This includes online quizzes (with multiple retries), and hands-on labs, among others. Dr. Ortega called these activities because they are meant not as a way to evaluate the students but to instead accelerate student engagement. The students are in turn graded for participation after completing these activities. The participation grade is common in some classes and requires the student to complete the activities. In the Spring of 2019, Dr. Ortega added mini-surveys to understand which concepts the students may find more difficult to understand. In the Fall 2020, he removed the mini-surveys because they did not work with the layout of his course.

With the experience gathered until Spring 2020, including the new COVID-19 reality, Dr. Ortega started to consider adding new techniques to his style and methods of teaching. CS 310H is a hybrid course, and in the Spring of 2021, will be a brand-new CS 464 human-computer interaction designed course that uses a unified framework to teach (while keeping the theory in place). This is in response to feedback and experience gained over the years of teaching the materials presented in the course. While a few students do great with the option to implement in any language they want, the majority face a bigger challenge.
Dr. Ortega offered CS 310H / IDEA 310H, a cross-listed course. This course included hands-on labs to develop virtual reality using Unreal Game Engine 5, as well as augmented and virtual reality concepts in the classroom.
Dr. Ortega has developed a series of materials and quizzes for CS 464. During spring 2023, Dr. Ortega will add more qualitative concepts since CS 464 has been heavily quantitative. The reason for Dr. Ortega to adapt his classes every year is to provide the most useful information to students that will be useful for industry and graduate school.
As of 2022, Dr. Ortega has improved all his classes. For example, Dr. Ortega integrated non-cs students with CS students in CS 310H/IDEA310H. Using a common starting point, Dr. Ortega has been able to teach concepts that satisfy students without coding experience while advancing existing CS knowledge to both groups of students. Another example is that Dr. Ortega uses most of his classes in a research and discovery approach. This means that the classes, besides basic knowledge about a topic, promote research for the students using their extensive knowledge of human-computer interaction (HCI). For example, in CS 464, students have to complete a research project selected by them with very similar standards to an HCI conference. Finally, Dr. Ortega, in CS 464, allows students to complete a prototype that could be used to continue research after the class is over or showcase it for jobs. This is equivalent to a "senior" year project in other universities. This is a capstone class.

CSU's ARVR Student Club

Dr. Ortega co-facilitates the ARVR Club where students of similar interests get together once a week to discuss topics, plan projects, and listen to presentations by them or other guests. Students from the club attended CSU's VR Hackathon (sponsored by the office of the vice president

of research). This included Ariana Mims, who won first place. The ARVR Club started in the Fall 2018 and it is still active. It has had some challenges during COVID but it continues to be active. Sadly, due to lack of interest, the ARVR Club ended its organization as Summer 2024.

CSU's VR Hackathon

Dr. Ortega is part of CSU's VR Hackathon committee and CSU's XR Symposium. During 2019, many of the students were recruited by Dr. Ortega and people invited to symposiums from outside Fort Collins came at his invitation. A group in Dr. Ortega's lab won the first prize. After COVID-19, the event was held again in 2022. The event had two teams that included Dr. Ortega's lab members. Dr. Ortega also held a session to help students understand the event and how to be successful.

Dr. Ortega also participated as a judge during the 2018 session. This platform, led by the vice president of research, allows students to come together and work on exciting projects. Some of these projects lead to research by CSU's faculty. During the 2018 session, Dr. Ortega invited 9 students from Florida International University to improve diversity and promote CSU. Students from AR/VR club also attended. He also recruited 8 students from his CS 457 course. Dr. Ortega's undergraduate research student Ariana Mims won first place in 2018. Most of the students Dr. Ortega recruited received awards including first, second, and third, and some smaller awards. This activity provides the ability to promote teaching and research during a 3-day event.

CSU's MST Day

Dr. Ortega's research lab continues to participate in the Math and Science Technology Day to promote Virtual Reality among 6th to 8th graders (October 3rd, 2019 and October 11th, 2018). This has been a great opportunity to promote STEM education to under-represented minorities.

CSU's Incoming Students Tour and CS activities

Dr. Ortega's research lab has always been present for the Computer Science department activities starting from Fall 2018. Dr. Ortega still provides his lab for tours for multiple events including CSU students, prospective students, guests, and K-12 students in the area.
